to minimize passengers' ~~just~~ total travelling by bus, train or both.

coners

Q88. each asks what the

best overall plan is and

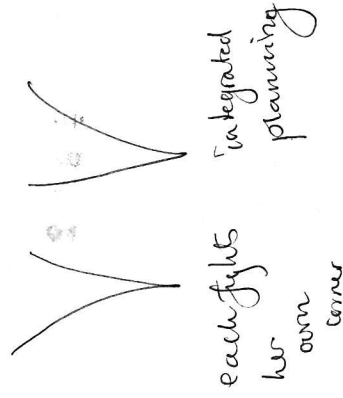

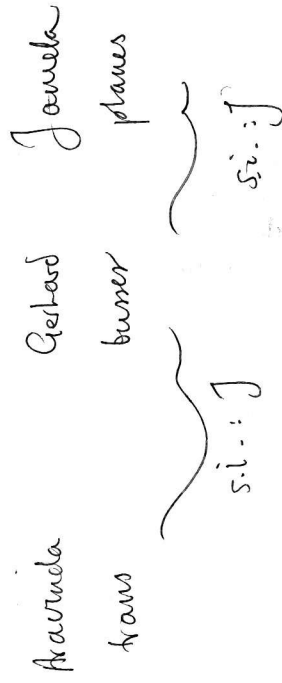

then sets the timetable

for their part accordingly

Aravinda runs the trains and Gerhard the buses.

1) They intend that they J .

J = to minimise the sum of passengers' total journey times when travelling by b, t, p or any combination of the three

Current worry: they do jointly J : But

there is rather activity, the detailed

planning which they do or don't do

together. So there is no counterexample — there only seems to be because we don't distinguish the main_{air} from the implementation of it.
